

**PURPOSE-BUILT
COMPETITION CHASSIS**

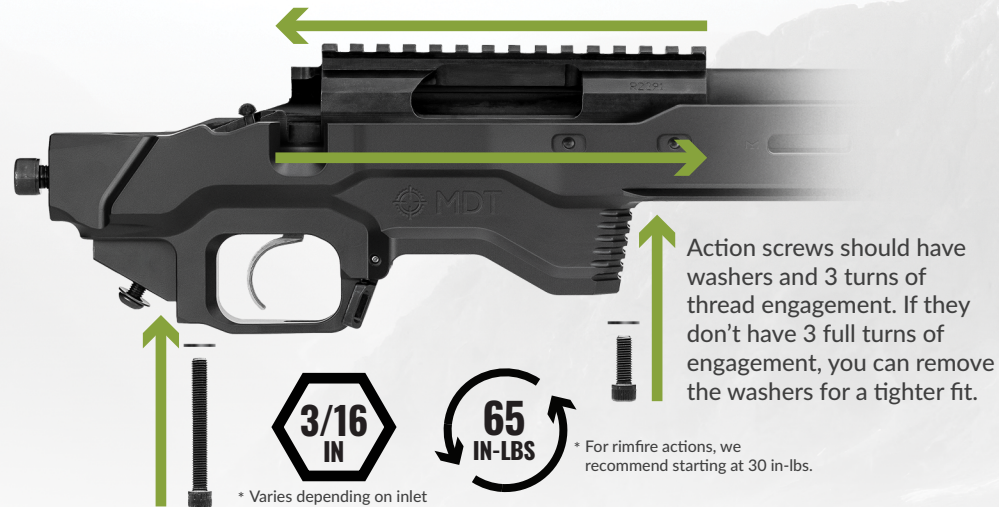

ACC PREMIER

Built to win, and regarded by many as the unparalleled standard for competitive precision rifle shooting, the MDT ACC Chassis System was designed around an integrated, modular weight management system, allowing you to customize the balance and mass of your rifle to maximize performance and minimize recoil.

- 1** Remove the bolt and place the action into the MDT ACC Premier Chassis, ensuring that the trigger and recoil lug are lined up with the corresponding positions in the chassis.

- 2** Apply rearward pressure on the chassis with the barrelled action. While maintaining pressure, tighten the barrelled action in place with the action screws. Then, starting with the front screw, torque both screws to 65 in-lbs.
